

CHEMOKINE-BINDING PROTEIN AND METHODS OF USE

Abstract of the Disclosure

Described herein are chemokine-binding domains of THAP-family polypeptides and pharmaceutical compositions which include a polypeptide comprising a chemokine-binding domain of a THAP-family polypeptide. Also disclosed are methods of binding chemokines, inhibiting the activity of chemokines, detecting chemokines, and reducing the symptoms associated with a chemokine mediated or influenced condition by contacting the chemokine with an agent that includes a polypeptide comprising a chemokine binding domain of a THAP-family polypeptide.
